PTV Group

Empowering mobility

Company Profile

PTV | GROUP

the world of tomorrow

PTV. Empowering mobility.

The PTV Group provides software solutions and consulting services to empower mobility and transport for a cleaner and smarter future. Customers in over 120 countries rely on PTV solutions - its best-in-class software for intelligent traffic management - and transport optimization enables decision-makers in politics, cities, organization, industries, and logistics save time and money, make roads safer, and protect the environment.

Located in the heart of the Karlsruhe technology region, PTV's head office has been the company's center of development and innovation since its foundation in 1979. The latest developments in science, technology and research are continuously incorporated into our product development. Today, approximately 900 employees worldwide work on powerful, future-oriented solutions to create intelligent and eco-friendly mobility for everyone.

Number of employees:
> 900 worldwide

Turnover:
> 100 Million

> 2.500 cities make
smart decisions based
on our software

Business segments and Realignment Program

The PTV Group traditionally operates in three business segments:

Mobility

Mobility - providing a wide range of cutting-edge software products for transport modeling, simulation and traffic management. This segment also includes mobility data analysis, enabling planners to evaluate urban mobility scenarios and create new, sustainable concepts.

Logistics

In the field of **Logistics**, we offer state-of-the-art software for planning and optimizing transport logistics - from logistics process chains to freight transport scheduling and route planning.

Transport Consulting

The third business unit **Transport Consulting** focuses on evaluating transport systems, identifying new mobility management concepts and developing transport-related measures, including environmental impacts.

As part of the Realignment Program, these two business units will be closely integrated by creating a networked platform for mobility and transport software with Software-as-a-Service (SaaS) applications. The key objectives of the strategic realignment are to continue enhancing the existing product portfolio and to transform most of the desktop applications into cloud-based solutions.
